

## Information on the Covid 19 vaccination

Dear citizens of Schaffhausen

### **Please get vaccinated!**

**You will protect yourself and your family from a serious infection.**

The Corona pandemic has spread widely in Switzerland and many people are getting infected and some of them fall seriously ill. Fortunately, there are vaccines that protect us from the disease. The vaccination requires two injections - four weeks apart. After that, you will be well protected, even from the dominant delta variant.

The vaccine is well tolerated by our body. Possible side effects (pain at the injection site, headache, fever) are usually mild and last for only a short period of time. These side effects are usually much less severe than when you actually get infected with corona.

Serious long-term side effects and late effects have not occurred so far and are not to be expected.

We would like to finally overcome the pandemic and return to a normal life. In order to achieve this, we need the vaccination.

The vaccination is free of charge.

The vaccination certificate makes travelling abroad easier and guarantees access to various events.

We look forward to welcoming you to the Charlottenfels Vaccination Centre. It is very easy and uncomplicated to get the vaccination, either with or without previous registration.

With kind regards

The Covid-19 vaccination team

### **How can I get vaccinated?**

*Please bring your personal ID and your insurance card*

Take advantage of our walk-in offer without any previous appointment:

Visit our vaccination center during the following times in order to get vaccinated without any appointment:

- Monday 5 – 8 pm
- Tuesday 5 – 8 pm
- Friday 2 – 8 pm
- Saturday 9 am – 1 pm

Or register and book an appointment under the following number

**052 632 65 57**

Or register online and choose your desired appointment:

NEW: Visit [www.sh.ch/corona](http://www.sh.ch/corona) and book your appointment for your first and second dose **individually from all available dates.**

Even if a vaccination provides good protection against infection, it is important to continue following the recommended hygiene and behavioural rules.
